Full Stack Developer | MERN Stack | Next.js | Node.js | AI Agents & Automation

Full Stack MERN Developer with 4+ years of experience building scalable web applications across booking platforms, gaming systems, and e-commerce products. Proficient in React.js, Next.js, Node.js, TypeScript, PostgreSQL, MongoDB, Docker, and AWS — consistently delivering 30–80% improvements in API performance, system reliability, and application efficiency. Experienced in developing AI-powered chatbots and automation workflows using OpenAI API, n8n, and Make.com.

IT SKILLS

Languages: JavaScript (ES6+), TypeScript.

Frontend: React.js, Next.js, Redux Toolkit, Context API, Responsive Design, HTML5, CSS3.

Backend: Node.js, Express.js, NestJS, GraphQL, WebSocket, RESTful APIs, Microservices Architecture, Rate Limiting, Load Balancing, TypeORM, Prisma.

Databases: PostgreSQL, MariaDB, MongoDB, DynamoDB, Redis.

Cloud & DevOps: AWS (S3, Lambda, CloudWatch), Docker, CI/CD, Jenkins, Agile/Scrum.

Tools & Testing: Git, Postman, Jira, Chrome DevTools, Node Inspector, Jest, Unit Testing, Integration Testing.

Soft Skills: Collaborative Problem Solving, Technical Leadership, Analytical Thinking.

AI & AUTOMATION

- Built conversational chatbots using OpenAI API integrated with custom Node.js backends.
- Developed AI agents and automated workflows using n8n and Make.com.
- Experience with LangChain for building multi-step AI pipelines.
- Integrated no-code tools like Bubble.io for rapid prototyping.

WORK EXPERIENCE

Software Developer | Eminence Technology | Mohali, Punjab, India | Nov 2022 - Present

- Delivered end-to-end features for high-volume booking platforms using React.js and Node.js microservices, managing complete feature lifecycles from UI to backend.
- Architected a rule-based pricing engine to automate supplier logic, reducing manual intervention by 50% and improving pricing accuracy.
- Improved application response time by 30–40% by optimizing frontend data fetching and backend middleware performance.
- Integrated third-party APIs with robust error handling and optimized MongoDB queries/indexing, reducing booking failures by 20% and enabling real-time data rendering.

Web Developer | BriskLogic | Mohali, Punjab, India | Sept 2021 – Nov 2022

- Improved frontend performance by 30–35% through React rendering optimization and efficient state management strategies.
- Increased REST API efficiency by 25% for data-heavy endpoints using MongoDB query optimization, indexing, and response compression middleware.
- Resolved critical bottlenecks through end-to-end debugging across the MERN stack using Chrome DevTools and Node Inspector, improving application stability by 25% while collaborating in Agile/Scrum workflows using Jira.

PROJECTS

TMP (Booking Management Platform)

Technology: MERN Stack.

Role: Middleware / Backend Developer.

- Processed 10k+ records per request using chunk-based fetching and pagination, reducing API latency by 30–40% through optimized query execution and request handling.
- Built a rule-based pricing engine to automate supplier markups and pricing updates, reducing manual intervention and improving booking accuracy.
- Designed scalable backend architecture to handle high concurrent requests, integrating external APIs with retry and fallback logic to minimize failures and improve system reliability.
- Implemented real-time features using WebSocket and managed complex relational data models with TypeORM and PostgreSQL, ensuring data consistency across high-volume transactions.

NEXUS (Gaming Platform)

Technology: MERN Stack.

Role: Full Stack Developer.

- Increased API performance by 30% by restructuring database queries and optimizing backend logic.
- Developed full-stack features using React.js and Node.js to enable secure contract exchange and file transfer functionality.
- Implemented unit and integration testing using Jest, improving reliability of critical API endpoints.
- Designed database layer with TypeORM, enhancing data retrieval efficiency and maintainability by 30%.

DBPS (Casting Management Platform)

Technology: MERN Stack.

Role: Backend Developer.

- Reduced API response time by 25–30% through MongoDB indexing and query optimization for high-volume endpoints.
- Developed scalable REST APIs using Node.js and Express to manage talent profiles, audition workflows, and media uploads.
- Designed backend architecture for concurrent request handling, ensuring scalable and efficient data flow.
- Utilized Prisma ORM for schema management and type-safe queries, improving data consistency and development efficiency.

The Nest Genie (ECommerce)

Technology: MERN Stack.

Role: Frontend Developer.

- Reduced page load time by 35–40% by optimizing React rendering and improving API consumption strategies.
- Built reusable component architecture in React, reducing UI code duplication by 30% and improving maintainability.
- Enhanced mobile responsiveness by 40%, ensuring cross-browser compatibility across modern devices.

EDUCATION

Bachelor of Computer Applications (BCA) | 2023 - 2025

Lovely Professional University — Phagwara, Punjab, India

Diploma in Electronics and Communication | 2018 - 2021

Pusa Institute of Technology — New Delhi, Delhi, India
