

RANJIT KUMAR SAH

FULL STACK ENGINEER | NODE.JS | REACT | TYPESCRIPT | AWS

+91-9319-473680 | ranjitkumarsah.dev@gmail.com | linkedin.com/in/ranjittherapids | github.com/ranjittherapids

PROFESSIONAL SUMMARY

Full Stack Developer with 5 years building high-performance frontend interfaces and scalable backend systems — from real-time React UIs to microservices handling 400,000+ searchable records. Solves the problems that break production: race conditions, unreliable third-party data, slow renders, and search that doesn't scale. Proficient across the MERN stack (MongoDB, Express.js, React.js, Node.js) plus TypeScript, Next.js, Nest.js, PostgreSQL, AWS, and AI integration via OpenAI API and LangChain.

Core Competencies: MERN Stack | Microservices Architecture | API Optimization | Database Design | Real-Time Systems | Cloud Infrastructure | AI/Automation | Technical Leadership | System Design | Scalable Architecture | DSA

CORE TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python

Frontend: React.js, Next.js, Redux Toolkit, Context API, HTML5, CSS3

Backend: Node.js, Express.js, NestJS, GraphQL, WebSocket, RESTful APIs, FastAPI, Microservices, TypeORM, Prisma, OpenSearch, Elasticsearch

Databases: PostgreSQL, MongoDB, Redis, DynamoDB

Cloud: AWS (S3, Lambda, CloudWatch), Docker, CI/CD, Jenkins, GitHub Actions

API & Architecture: Swagger/OpenAPI, Microservices, Real-Time Systems, WebSocket

Testing & AI: Jest, Unit Testing, Load Testing, Playwright, OpenAI API, LangChain, n8n, Workflow Automation

Web Scraping & Automation: Puppeteer, CucumberJS

WORK EXPERIENCE

Software Developer | Eminence Technology | Mohali, Punjab, India | 11/2022 – 07/2026

- Built a rule-based pricing engine normalizing logic across 10+ suppliers, cutting manual pricing corrections by ~40%
- Fixed a race condition causing duplicate booking requests to double-book inventory in roughly 2–3% of peakhour transactions; added request locking and idempotency keys, bringing that rate to near 0
- Integrated third-party supplier APIs with retry logic, circuit breakers, and fallback handling, reducing booking failures from unreliable upstream responses by ~20%

Web Developer | BriskLogic | Mohali, Punjab, India | 09/2021 – 11/2022

- Refactored a Redux store with heavy prop drilling and redundant re-renders across 15+ components, cutting unnecessary re-renders by ~25%
- Rewrote MongoDB queries doing full collection scans under load, adding compound indexes that cut average query time from ~400ms to ~120ms
- Tracked down a memory leak in a long-running Node process causing server restarts roughly every 2–3 days fix extended uptime to 2+ weeks between restarts

ADDITIONAL EXPERIENCE

- Developed **Machine Learning** models to detect fake email IDs, improving email validation accuracy and reducing fraudulent registrations.
- Built **Generative AI** solutions using GPT-4, LangChain, and RAG, reducing support tickets by **25%** and document lookup time by **40%**.

PROJECTS

TMP (Booking Management Platform) | Backend Developer

- **Engineered** a **multi-product travel booking platform** similar to Booking.com, supporting **Hotels, Flights, Attractions, Theme Parks, Car Rentals, Vacation Rentals, and Travel Insurance**, processing **1000+ booking requests/day**.
- **Eliminated** double-booking issues by implementing **TypeORM transactions** and **WebSocket-based real-time synchronization**, ensuring data consistency across concurrent booking services.
- **Accelerated** hotel search by integrating **OpenSearch** with autocomplete and fuzzy matching across **400K+ properties**, while reducing API memory usage by **~30%** through streaming and pagination.

NEXUS (Gaming Platform) | Full Stack Developer

- **Implemented** a secure **peer-to-peer contract negotiation** workflow with **RBAC** and **JWT authentication**, improving authorization accuracy across **2000+ contract records**.
- **Established** a **Jest** testing framework with **80%+ code coverage**, preventing **10+ critical regressions** before production releases.
- **Boosted** backend performance by optimizing SQL queries, indexing, and API execution paths, reducing average response time by **~35%**.

DBPS (Casting Platform) | Backend Developer

- **Architected** an audition workflow using a **state machine**, eliminating invalid state transitions and improving workflow reliability for **5000+ talent profiles**.
- **Automated** data ingestion by creating a web scraping pipeline that consolidated and normalized **5,000+ profiles** from **5+ external sources** into a unified schema.
- **Migrated** the data layer to **Prisma ORM** across **30+ database tables**, eliminating schema drift and reducing deployment-related database issues to near zero.

The Nest Genie (E-Commerce) | Frontend Developer

- **Optimized** React rendering with memoization and granular state updates, reducing unnecessary component re-renders by **~60%**.
- **Reduced** initial page load time from **4.2s to 2.5s** by introducing **code splitting, lazy loading**, and bundle optimization.
- **Automated** product catalog creation by extracting **3000+ product records** from third-party websites through a custom web scraping pipeline.

EDUCATION

Bachelor of Computer Applications (BCA) | Lovely Professional University, Phagwara, Punjab

Completed: Jan 2025 | CGPA: 7+

Relevant Coursework: Web Development, Database Management, Software Architecture

Diploma in Electronics & Communication Engineering | Pusa Institute of Technology, New Delhi

Completed: June 2021 | 75%

Relevant Coursework: Digital Electronics, Microprocessors, Circuit Design
